

# EEMB DS Capstone Tracking, Key Values, and Timestamping GUI Manual

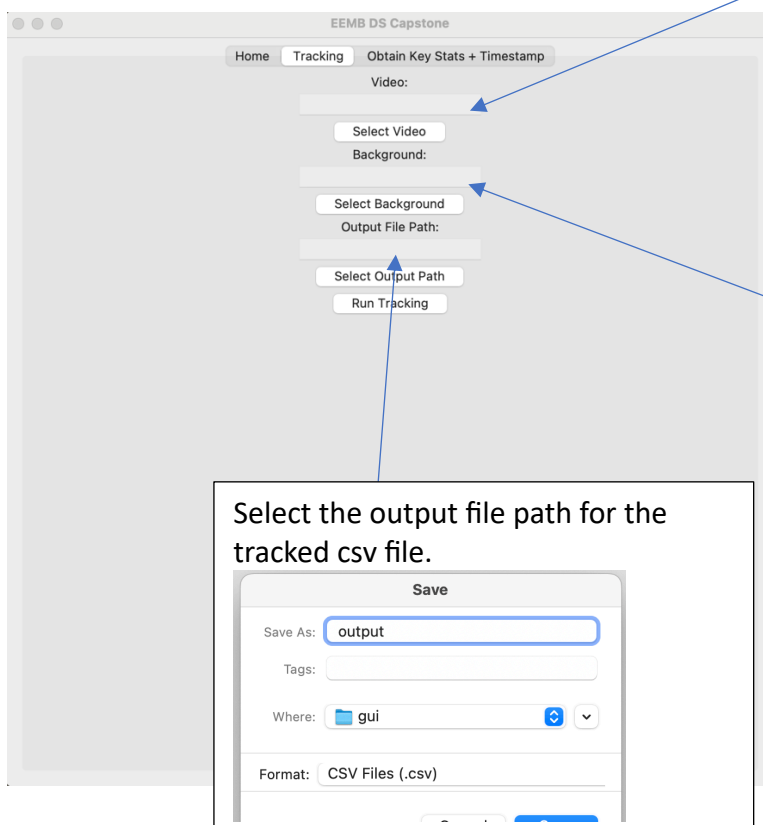

Select tab 3 for key values and timestamp.

Select tab 2 for tracking.

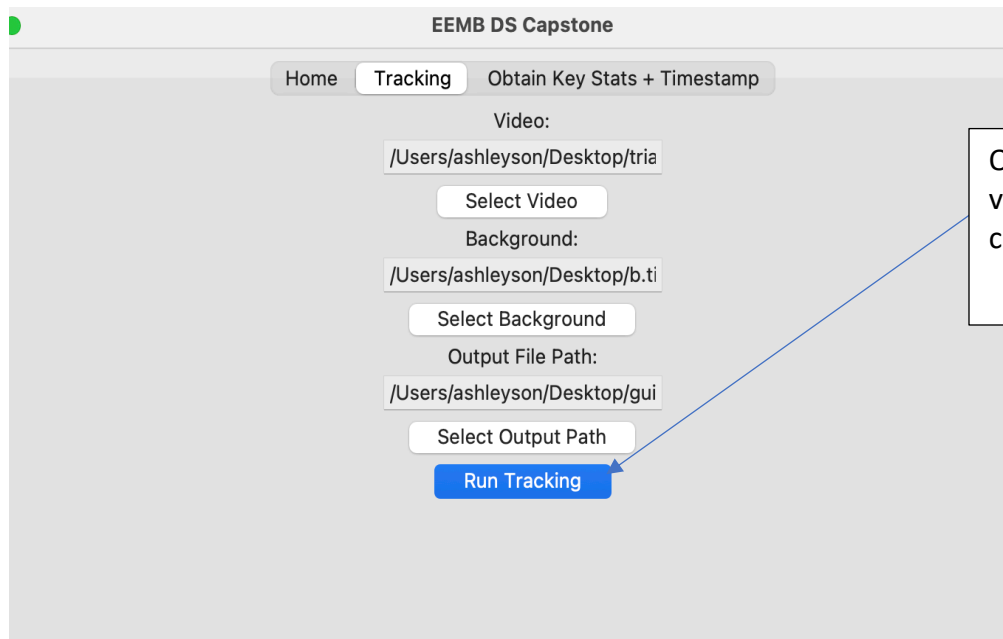

Select the video you want to track.

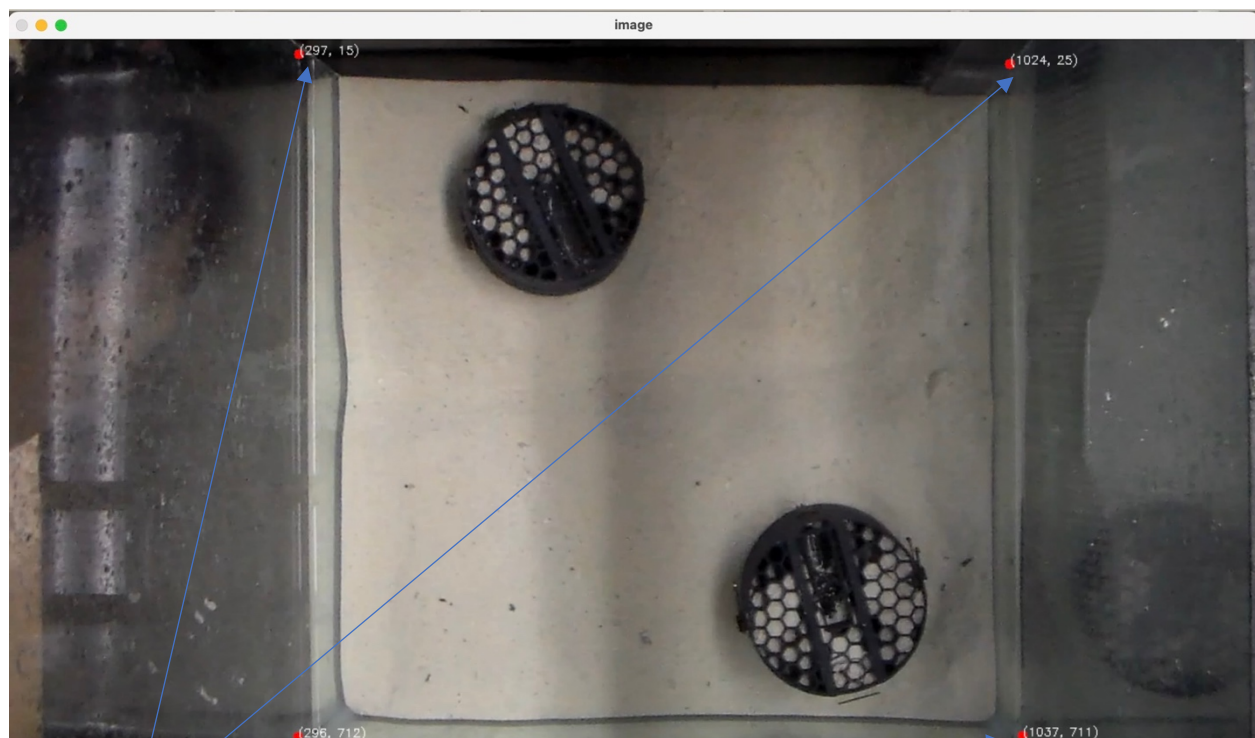

Select the background for that video.

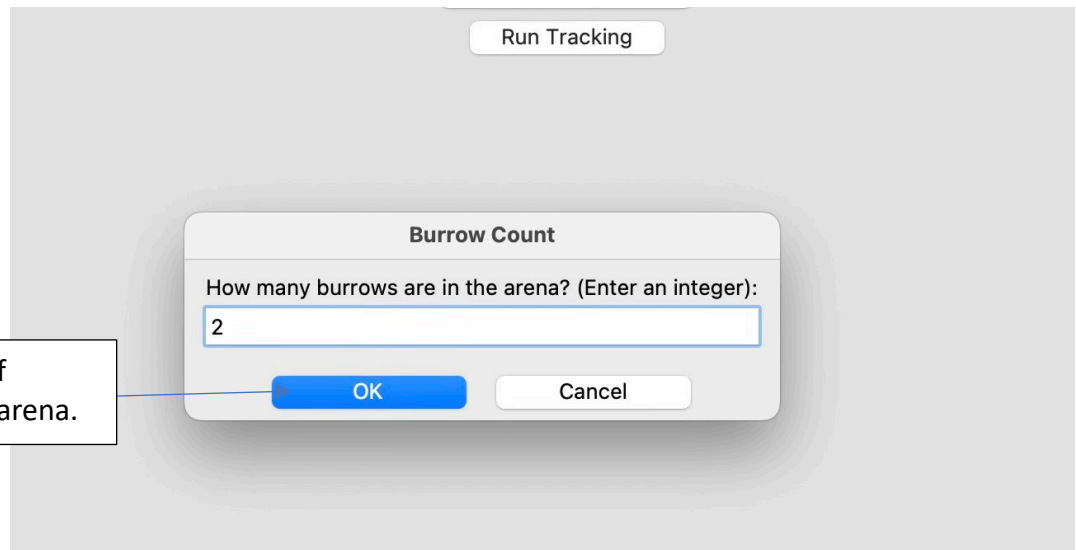

Select the output file path for the tracked csv file.

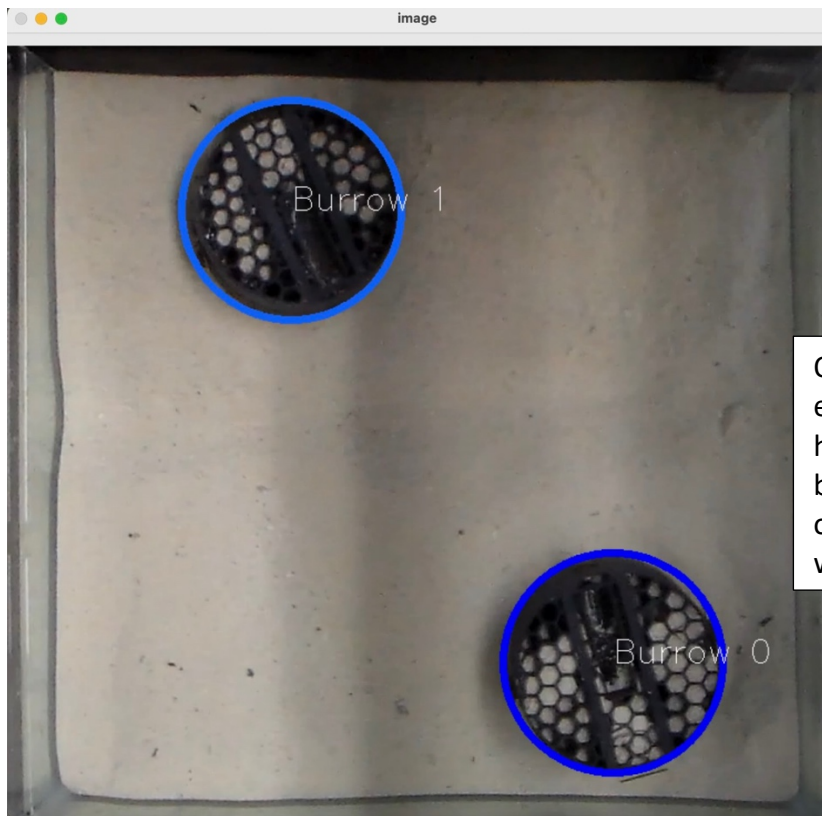

Once you have selected a video and its background, click “Run Tracking”.

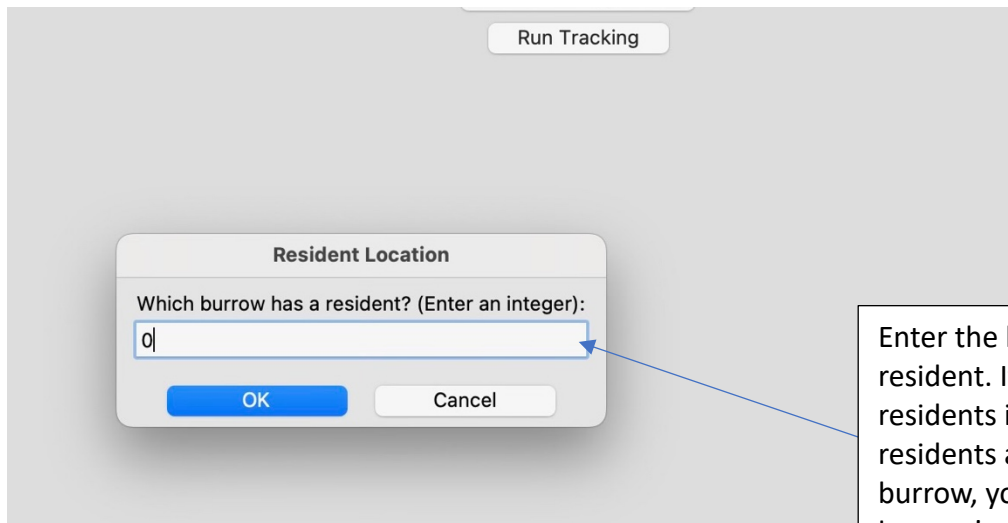

Once you have ran the tracking, there will be a pop up for you to initialize the four corners of the tank. Select the four corners. If you are not content with the four corners, click “n” on your keyboard to clear the points for you to reselect. If you are satisfied with the four corners, click “y” and it will direct you to the next steps.

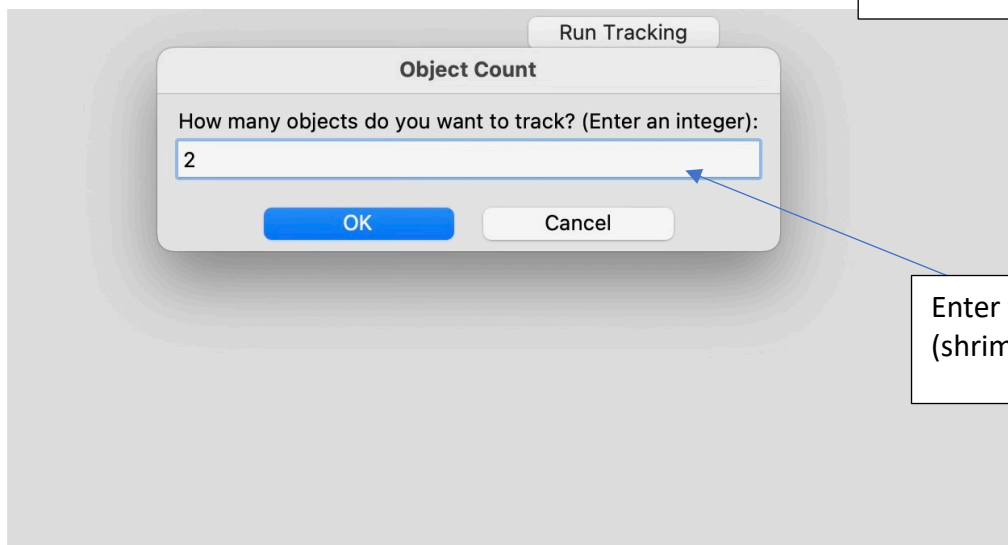

Enter the number of burrows within the arena.

Once the number of burrows are entered, your burrows will be highlighted. Validate that the burrows are correct and click "y" on your keyboard to proceed with tracking.

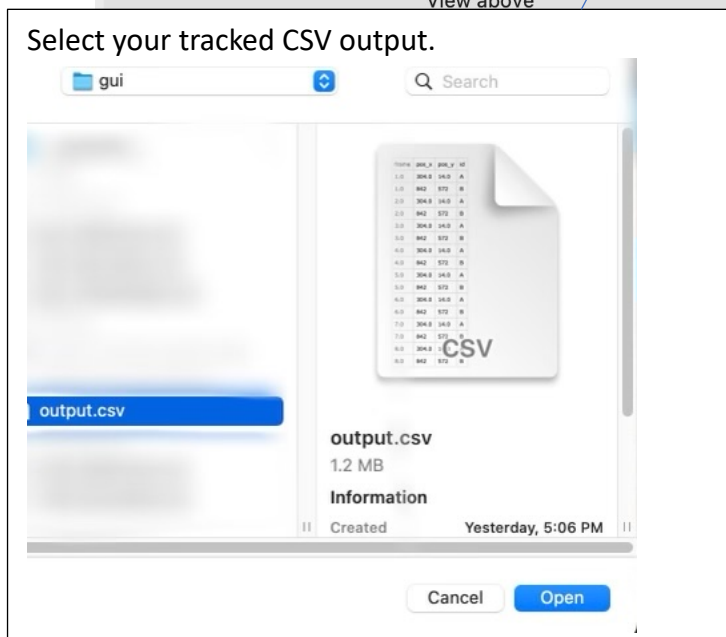

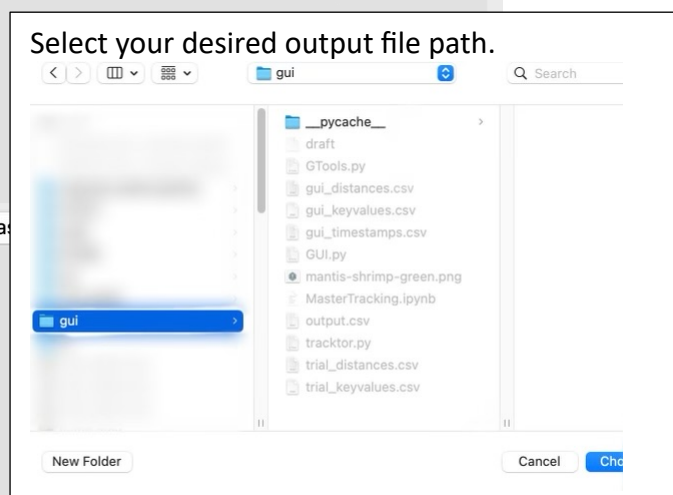

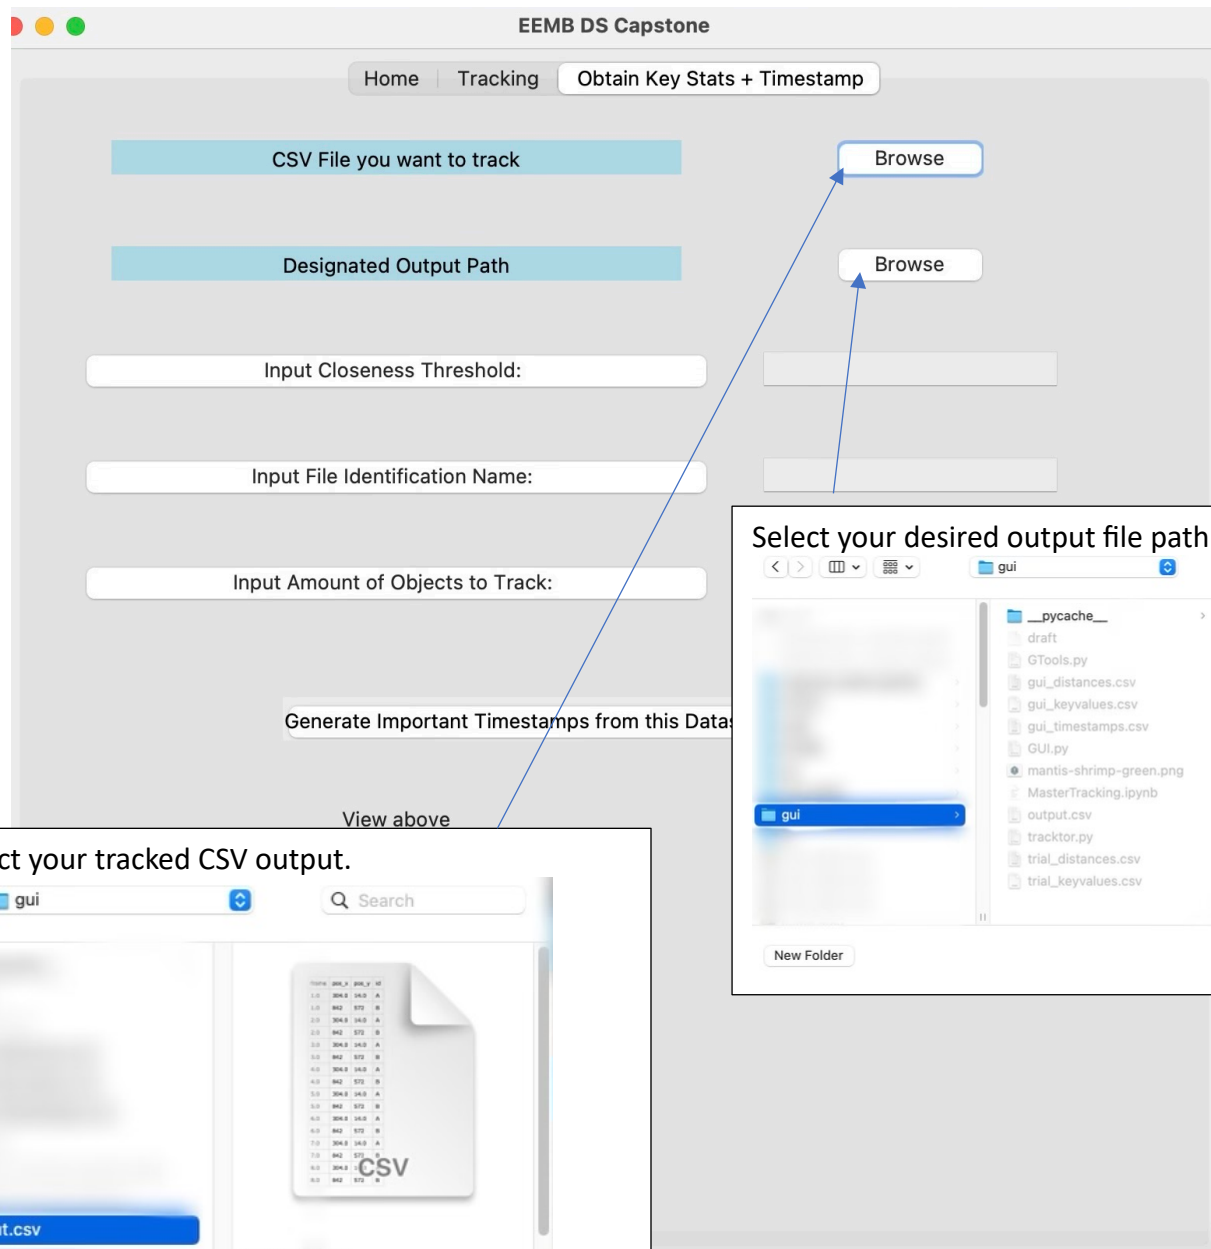

Enter the burrow with the resident. If there were no residents in the burrow or both residents are residing in the burrow, you may type in either burrow's number from the previous pop up.

Enter the number of objects (shrimp) you would like to track.

Once selecting "OK," the tracking process will begin, you can find the output.csv in the same location as your video and background.  
Happy Tracking! 😊
